

48-005 Type 4 national Insignia and data Decals Pt1 for the P-47 Thunderbolt

Besides enough insignia to do 9 complete aircraft in multiple configurations, there is plenty of excess data that you won't find on most decal sheets, either in the "box" or as aftermarket. Below are a few examples.

PROP DATA

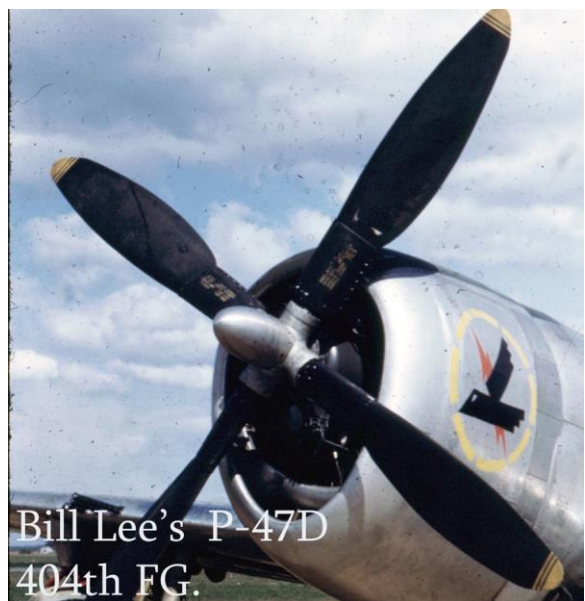

Factory configuration P-47 blades were lo luster or flat black with 4 inch Insignia Yellow tips. Use black and yellow single stripes for the Aero Products 12' 2" blades. A.O. Smith 12' 2" Asymmetrical blades, use black and yellow double stripes. Check your references for variations.

Featured are 6 different blade types + an extra 13' Symmetrical with different data presentation.

There are enough blade specific decals to do 4 sets of each type. Plenty of accurate Curtiss Electric logo's and plenty of spare Hamilton Standard logo's using gold ink background that makes them stand out.

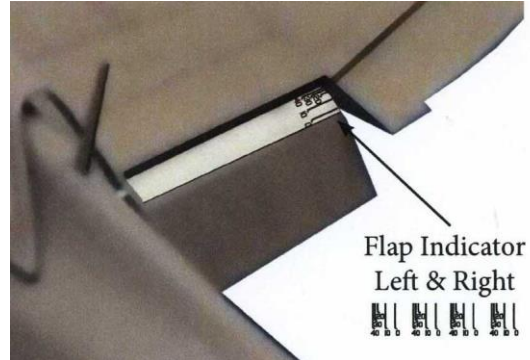

12' 2" A.O. Smith Asymmetrical blades complete with fine, twin prop tip stripes

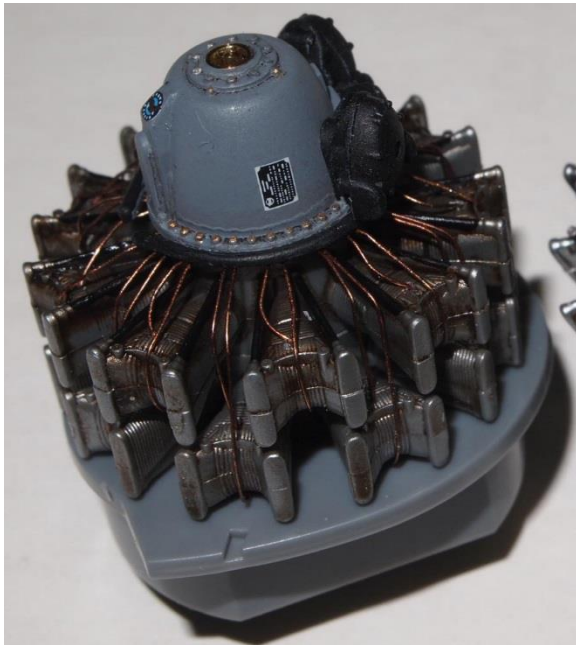

Hamilton Standard 13' diameter blades utilizing the most common white data. The image doesn't do justice to the logo.

There are 8 sets of flap indicators. These are particularly useful for the Tamiya P-47 series as the kit allows for lowered flaps.

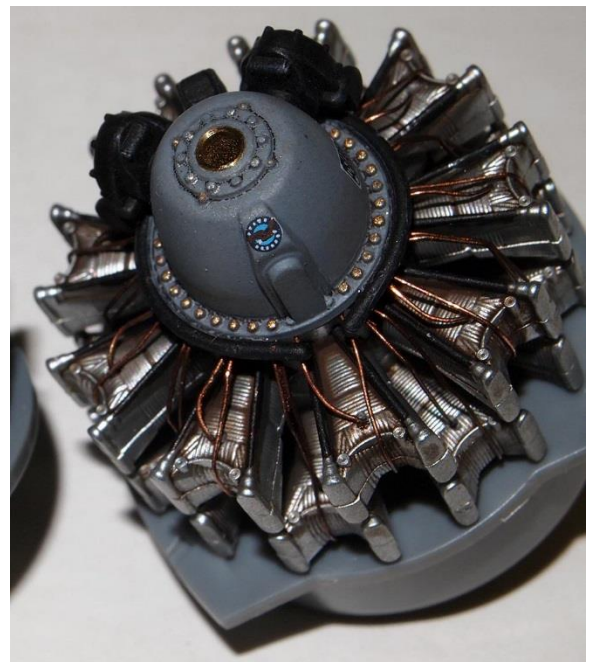

Flap Indicator
Left & Right

Flap indicator decals are not included on the kit decals

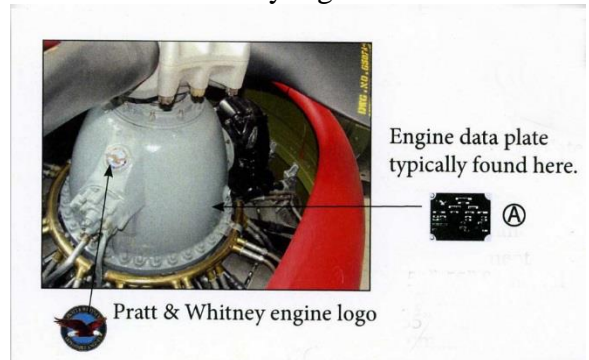

A pair of well-done and wired Tamiya engines by Ed Mate.

Final touches are the P&W engine data plate And Pratt & Whitney logo decals.

ALSO on this 2 decal set release are 2 different types of landing gear hydraulic data plates, wing gun numbers and red wing root NO STEPs. This decal set and other ThunderCal releases, can be purchased at [ThunderCals@yahoo.com](mailto:Thundercals@yahoo.com) 48005, a 2 decal set \$22.00ea. Dealer inquiries welcome
